

VT AJ Bell Global Growth

As at 30 June 2025

Portfolio commentary

The heavy exposure of the AJ Bell Global Growth Fund to markets outside North America worked in the fund's favour throughout the second quarter despite uncertainty around US tariff policies.

The strongest performance came from emerging markets ex-China and the Pacific ex-Japan. Taiwan and Australia led the way with gains from semiconductor company TSMC and the Commonwealth Bank of Australia.

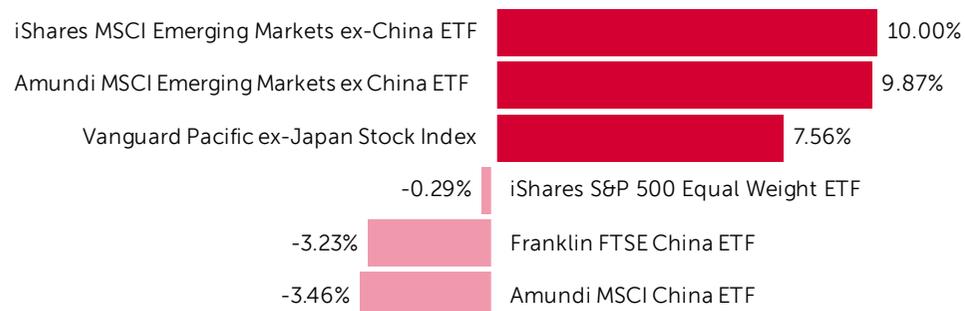

The push and pull between China and the US over tariff policies caused unease on the market, but some US giants such as Nvidia and Microsoft still created positive returns. With North America making up 16% of the asset allocation, and China at 8%, the effects were dampened.

Nearly one quarter of the fund is in the UK market which benefited from positive returns across the defence and financial sectors.

Changes in currency value represented a challenge across multiple regions. The US dollar dropped in value versus the pound, as did the yen. This caused returns from Japan, which were strong throughout the quarter, to be significantly dampened once converted to sterling.

Overall, geographic and sector diversification worked in the fund's favour, helping to generate a 5.01% return for the second quarter.

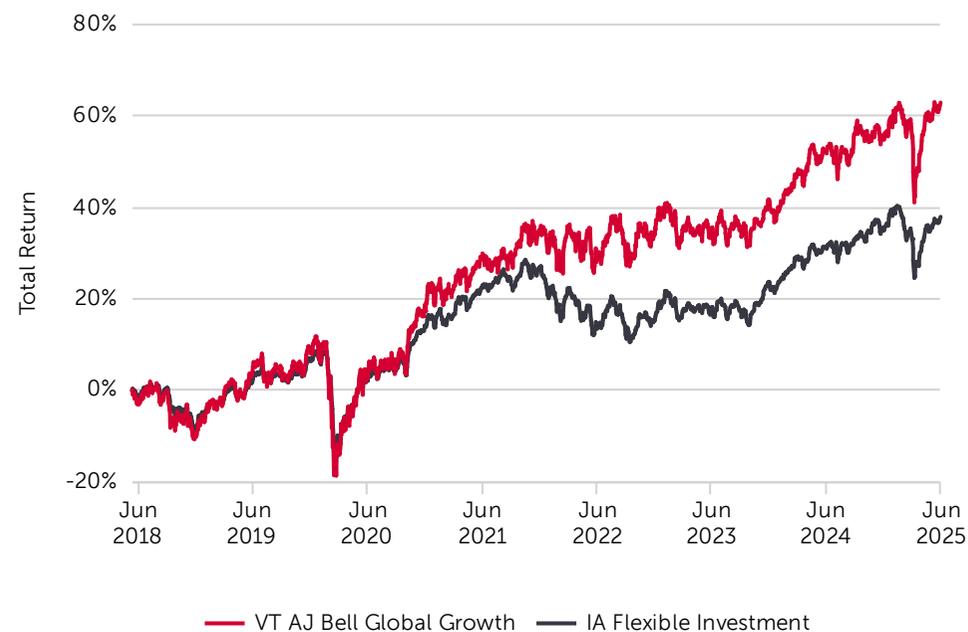

Q2 2025 best/worst performers

Performance

Cumulative (%)	3 months	6 months	1 year	3 years	5 years	Since inception
VT AJ Bell Global Growth	5.01	5.26	6.88	27.27	57.29	62.99
IA Flexible Investment	3.79	2.19	5.01	21.45	34.98	37.95

The above table displays the total return of the fund on a cumulative basis. This is taken from the most recent month end.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

The Ongoing charges figure (OCF) includes the underlying OCF, the annual management fee, and the costs for running and administering the fund structure. The annual management fee is variable, as it consists of the fixed OCF, minus all other costs.

Transaction costs represent the net costs incurred by the fund in buying and selling underlying investments. These are the gross costs offset with any pricing mechanisms used by the fund to protect investors from the cost of transactions (such as swing pricing). In some instances this may result in a negative number.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the Fund. The Fund does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Totals may not sum to 100% due to rounding.

Currency Risk: The Fund invests in overseas markets and the value of its investments and may rise or fall as a result of changes in exchange rates.

Emerging Markets Risk: The Fund invests in less economically developed markets (i.e. emerging markets) which can involve greater risks and fluctuations in valuations compared to developed market places.

Index Trading Risk: The performance of any passively managed funds may not exactly track that of their indices. This is referred to as 'Tracking error'.

Interest Rate Risk: Fluctuations in interest rates may affect the value of the Fund and your investment.

Liquidity Risk: The Fund invests within underlying funds and there is a risk that these suspend or defer the payment of redemption proceeds, which may impact the Fund's ability to meet redemption requests.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

The market capitalisation classifications in this report are based on a tiered methodology developed by Morningstar. Market capitalisation is the total value of a company's shares on the stock market. Under this method, giant-cap shares make up the top 40% of total market value; large-cap shares represent the next 30%; mid-cap the following 20%; small-cap the next 7%; and micro-cap the remaining 3%. These classifications are for analytical purposes only and may differ from other industry definitions.
