

# VT AJ Bell Income Q3 2022 Report

## Commentary

Income-seeking investors have had a mixed 12 months. Companies that return cash quickly to shareholders – so-called ‘value stocks’ – have performed better than general markets over the last year. But the third quarter of 2022 saw a rebound in growth stocks, such as technology companies, which reinvest profits rather than distribute them.

The weakness in the pound following the new government’s mini budget, coupled with the relative strength of the US dollar, saw US-based holdings in the fund perform well. While UK government bonds lost value, US government bonds increased in value in GBP.

Infrastructure holdings were volatile this quarter. These usually provide good inflation protection, but suffered during the market volatility we saw at the end of September 2022.

Overall, the Income fund returned –1.3% over the quarter, bringing the 12-month return to –1.7%.
